WHAT IS HEALTH RISK MONITOR

Health Risk Monitor (HRM) provides accurate clinical predictions of each member's health and cost. The system provides actionable information to enhance revenue and contain your client's cost and risk. This enables utilization management, disease management, and a variety of health coaching services to identify, stratify, and manage health conditions within a given population. HRM doesn't just look at members who were high-cost last year but identifies future high-cost members based on their current clinical condition, including gaps in care and the likely outcomes of that data. You can share access to HRM with your UR, large case, and disease management vendors. You can't change the dollars spent last year, but with our solution, you can focus your resources on your clients' cost-saving opportunities for next year.

DATA INTEGRATION

HCRM eliminates the task of integrating, scrubbing, and manipulating data. We collect data from you, the PBM, and other client vendors using your standard layouts and those used by the other vendors; the odds are that we already have an established interface with all your data sources. HCRM's personnel will validate and normalize the data with extensive quality control. The data are collected monthly via SFTP so that you have the most current information about your clients' costs and clinical risks.

Member Centric

HCRM's predictive model is known for its accuracy because the predictions are made at the member level. The future high-cost members are identified by forecasted dollars - our measure of total risk - which are then broken down into individual clinical risk drivers, such as diabetes, hypertension, etc. The models accurately predict cost by clinical risk driver, pharmacy cost, and the likelihood of acute care. HRM provides you with information on what your client is facing next year and the reason behind the forecasted cost and risk of each member. Now, you can determine aggregate attachment points and specific deductibles at group and member levels.

REPORTING CAPABILITIES

1

HRM allows you to quickly and accurately identify and stratify your population into cohorts of interest, based on your book of business, individual plans or clinical groupings.

2

You can assess the effectiveness of care management programs implemented by plan vendors.

3

The reports focus on outcomes - both clinical and financial and compare the results based on member participation and in relation to national and regional data.
